Full-Stack Web Developer

WORK EXPERIENCE

Full Stack Web Developer — NovaCrew (Remote)

NOVACREW - JUNIO 2024

Back-End:

• Development of APIs for clients such as KFC, currently in production.
• Multilingual APIs (English, Portuguese, and French) for international support.
• Implementation of business logic and data structures for enterprise projects.
• Connection to and consumption of external services.
• Version control with Git using branches for development, testing, and production.

Front-End:

• Design and implementation of a modal for Claro, currently published on their official website.
• Consumption and integration of APIs in dynamic views.
• Collaboration with design teams to ensure responsive and engaging interfaces.

Co-founder & Full Stack Developer — Let One

2025 (PERSONAL PROJECT)

Artificial intelligence:

• Implementation of local AI models with Ollama (Llama 3.1).
• Development of a chatbot with its own API integrated into the model, without relying on third-party services.

Back-End & Front-End:

• Design and development of the product's REST API.
• Development of user interfaces for chatbot integration.
• Technical and architectural decision-making as co-founder.

PERSONAL PROJECTS

Booking App

Stack: JavaScript, React, PostgreSQL, Node.js, PGAdmin

- Hotel booking application with filtering by price and name.

PDF/Excel Generator

Stack: PHP, Laravel, SQL Server

- Application that generates detailed product reports in PDF and Excel.

ACHIEVEMENTS

• Recognized as an Outstanding Student in the Frontend and Backend Module with React.js and Node.js — Academlo G33.
• APIs developed for KFC with multilingual support, currently in enterprise-level production.
• Modal implemented for Claro, published on their official website.
